

Linear Actuators for Scissor lifting platforms

Scissor lifts are used in various locations, but on construction sites in our cities they are becoming more and more popular and legally required. Legislation on CO2 and greenhouse gas emissions along with low-emission zones, EU emissions regulations applying to small vehicles, enclosed space emission limits, environmental regulations and urban noise limits are all key issues for the manufacturer to consider. The trend is towards hybrid or all-electric solutions. Ewellix electromechanical actuators are strategic components in this technology.
