

# HOUSEHOLD APPLIANCES: ADELS-CONTACT CONNECTORS THAT COMPLAIN THE CERTIFICATION EN 60335

The advertisement features a background of a fire test. At the top, there are logos for OMEGA, ERMEC, and ADELS contact. Below the logos, the text 'Just Barcelona Area' is visible. The main text reads 'Household Appliances' and 'Conectors with EN 60335 Fire resistance test'. At the bottom, the website 'www.ermec.es/adels-contact' is provided. The image also shows various electrical connectors and a set of household appliances (refrigerator, washing machine, and dryer) being held by hands.

Plastic materials that are used in the field of household appliances or similar purposes in accordance with EN 60335, have to pass a fire resistance test. One particular characteristic of the EN 60335 is the stricter glow wire test for electrical appliances that are operated in households without supervision.

Adels-Contact offers a wide range of terminal blocks and connectors, the “GW” (for Glow Wire, GWIT 775°C) material of which comply with these requirements.
